The U.S. Cancer Statistics are the official federal cancer statistics, providing information on incidence (new cases) and mortality (deaths) in the United States.

U.S. Cancer Statistics includes incidence data from CDC's National Program of Cancer Registries and the National Cancer Institute's Surveillance, Epidemiology, and End Results Program, and mortality data from CDC's National Center for Health Statistics.

U.S. Cancer Statistics includes information from the United States and Puerto Rico. It can be used to:
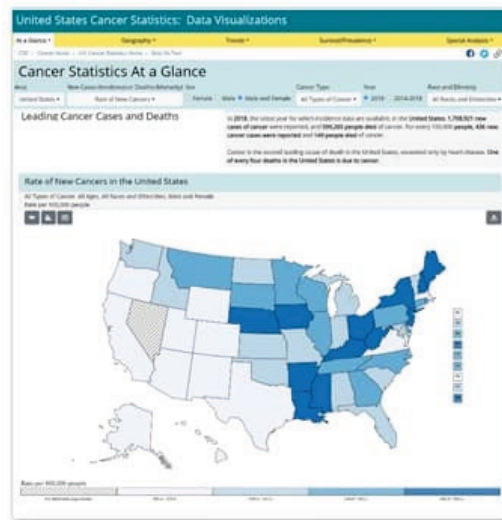

- Identify populations most affected by cancer.
- Investigate potential causes of cancer.
- Evaluate cancer prevention and screening activities.

The data are available in a public use database, a Data Visualizations tool, and other tools.

Data Visualizations tool

The Data Visualizations tool makes it easy for anyone to explore and use the latest U.S. Cancer Statistics data. It is available at **www.cdc.gov/cancer/dataviz**.

- Interactive graphics and data interpretations
- New cancer cases
- Cancer deaths
- Survival and prevalence
- By geography
- By sex, age, race, and ethnicity
- Over time
